

Recent Trends in Combinatorics		Editors: Andrew Beveridge, Jerrold R. Griggs, Leslie Hogben, Gregg Musiker, Prasad Tetali
Ch #	Title	Author(s)
Section 1: Extremal and Probabilistic Combinatorics		
1	Problems Related to Graph Indices in Trees	Laszlo Szekely, University of South Carolina; Stephan Wagner, University of Stellenbosch, SA; Hua Wang, Georgia Southern University
2	The edit distance in graphs: methods, results and generalizations	Ryan Martin, Iowa State University
3	Repetitions in graphs and sequences	Maria Axenovich, Karlsruhe Institute of Technology
4	Extremal problems for cycles in graphs	Jacques Verstraete, University of California, San Diego
5	A survey of Turán problems for expansions	Dhruv Mubayi, University of Illinois, Chicago; Jacques Verstraete, University of California, San Diego
6	Recent advances on Dirac-type problems for hypergraphs	Yi Zhao, Georgia State University
7	Rainbow Hamilton cycles in random graphs and hypergraphs	Asaf Ferber, Yale University; Michael Krivelevich, Tel Aviv University
8	Further applications of the Container Method	Jozsef Balogh, University of Illinois at Urbana-Champaign; Adam Zs. Wagner, University of Illinois at Urbana-Champaign
9	Independent transversals and hypergraph matchings - an elementary approach	Penny Haxell, University of Waterloo
10	Giant components in random graphs	Mihyun Kang, Technische Universität Graz
11	Infinite random graphs and properties of metrics	Anthony Bonato, Ryerson University; Jeannette Janssen, Dalhousie University
12	Nordhaus-Gaddum Problems for Colin de Verdière Type Parameters, Variants of Tree-width, and Related Parameters	Leslie Hogben, Iowa State University
13	Algebraic aspects of the normalized Laplacian	Steve Butler, Iowa State University
14	Progress on Poset-free Families of Subsets	Jerrold Griggs, University of South Carolina; Wei-Tian Li, Academia Sinica, Taiwan

15 Mathematics of causal sets	Graham Brightwell, London School of Economics and Political Science; Malwina Luczak, Queen Mary, University of London
Section 2: Additive and Analytic Combinatorics	
Lectures on approximate groups and Hilbert's 5th 16 problem	Emmanuel Breuillard, Université de Paris XI (Paris-Sud)
17 Character sums and arithmetic combinatorics	Mei-Chu Chang, University of California, Riverside
18 On sum-product problem	Andrew Granville, Université de Montreal; Jozsef Solymosi, University of British Columbia
19 Ajtai-Szemerédi Theorems over quasirandom groups	Tim Austin, Courant Institute of Mathematical Sciences
Section 3: Enumerative and Geometric Combinatorics	
Some algorithmic applications of partition functions in 20 combinatorics	Alexander Barvinok, University of Michigan
Partition Analysis, Modular Functions, and Computer 21 Algebra	Peter Paule, Johannes Kepler Universität Linz; Cristian-Silviu Radu, Johannes Kepler Universität Linz
22 Moments of orthogonal polynomials and combinatorics	Sylvie Corteel, Centre National de la Recherche Scientifique (CNRS); Jang Soo Kim, Sungkyunkwan University (SKKU); Dennis Stanton, University of Minnesota
The combinatorics of knot invariants arising from the 23 study of Macdonald polynomials	Jim Haglund, University of Pennsylvania
24 A survey of consecutive patterns in permutations	Sergi Elizalde, Dartmouth College
Dynamical Algebraic Combinatorics and the Homomesy 25 Phenomenon	Tom Roby, University of Connecticut
26 Face enumeration on simplicial complexes	Steven Klee, Seattle University; Isabella Novik, University of Washington
27 Unimodality Problems in Ehrhart Theory	Benjamin Braun, University of Kentucky
28 Simplicial and Cellular Trees	Art M. Duval, University of Texas, El Paso; Caroline J. Klivans, Brown University; Jeremy L. Martin, University of Kansas
Parametric Polyhedra with at least k Lattice Points: Their 29 Semigroup Structure and the k -Frobenius Problem	Iskander Aliev, Univ of Cardiff, UK; Jesus De Loera, University of California, Davis; Quentin Louveaux, Univ of Liege, Belgium
